

Course: **2792A: Implementing and Maintaining Microsoft SQL Server 2005 Integration Services**

Description: Elements of this syllabus are subject to change.
This three-day instructor-led course teaches students how to implement an Integration Services solution in an organization. The course discusses how to develop, deploy, and manage Integration Services packages.

Price: \$1,425.00

Category: SQL

Duration: 3 days

Schedule:

[Request Dates](#)

Outline:

Module 1: Introduction to SQL Server 2005 Integration Services

This module introduces the role that Integration Services plays in extracting, transforming, and loading data. This module also describes the tools that you can use to build and manage Integration Services solutions.

Lessons

- Overview of Integration Services Solutions

- Integration Services Tools

Lab : Using SQL Server Integration Services

- Using the Import and Export Wizard

- Running an Integration Services Package

After completing this module, students will be able to:

- Describe Integration Services solutions.

- Use Integration Services tools.

Module 2: Developing Integration Services Solutions

This module provides an overview of the development tasks that are involved in creating an Integration Services package. After completing this module, you will be able to create a basic package.

Lessons

- Creating an Integration Services Solution

- Using Variables

- Building and Running a Solution

Lab : Implementing an Integration Services Solution

- Creating an Integration Services Project

- Implementing a Package

- Building and Running an Integration Services Project

After completing this module, students will be able to:

- Create a SQL Server Integration Services solution.

- Use variables.

- Build and run a solution.

Module 3: Implementing Control Flow

This module introduces the tasks and precedence constraints that you can use to implement control flow in an Integration Services package.

Lessons

- Control Flow Tasks
- Control Flow Precedence Constraints
- Control Flow Containers

Lab : Implementing Control Flow

- Creating a Simple Control Flow
- Configuring Precedence Constraints
- Using Containers

After completing this module, students will be able to:

- Configure control flow tasks.
- Configure control flow precedence constraints.
- Configure control flow containers.

Module 4: Implementing Data Flow

This module describes the data flow sources, transformations, and destinations that you can use to implement a data flow task in an Integration Services control flow. It also explains how to use data flow paths to direct valid and invalid rows through the data flow.

Lessons

- Data Flow Sources and Destinations
- Data Flow Transformations
- Data Flow Paths

Lab : Implementing Data Flows

- Transferring Data
- Implementing Transformations
- Using Data Viewers
- Configuring Error Output

After completing this module, students will be able to:

- Implement data flow sources and destinations.
- Implement data flow transformations.
- Implement data flow paths.

Module 5: Implementing Logging

This module discusses how to use logging in an Integration Services package, and explains how to configure and use logging providers to generate information about a package's execution.

Lessons

- Overview of Integration Services Logging
- Implementing Logging

Lab : Implementing Logging

- Configuring Logging
 - Implementing Custom Logging
- After completing this module, students will be able to:
- Describe Integration Services logging.
 - Implement logging.

Module 6: Debugging and Error Handling

This module describes how to debug Integration Services packages by using the debugging tools in Business Intelligence Development Studio. It then explains how to implement error-handling logic in an Integration Services package.

Lessons

- Debugging a Package
 - Implementing Error Handling
- Lab : Debugging and Error Handling
- Debugging a Package
 - Implementing Error Handling
 - Controlling Failure Behavior

After completing this module, students will be able to:

- Debug a package.
- Implement error handling.

Module 7: Implementing Checkpoints and Transactions

This module explains what checkpoints are and how to implement them. It then discusses transactions, and describes how you can implement transactional data access logic in an Integration Services package.

Lessons

- Implementing Checkpoints
 - Implementing Transactions
- Lab : Implementing Checkpoints and Transactions
- Implementing Checkpoints in a Package
 - Implementing Transactions in a Package
 - Implementing a Native Transaction

After completing this module, students will be able to:

- Implement checkpoints.
- Implement transactions.

Module 8: Deploying Packages

This module discusses how to create Package Configurations and how to deploy Integration Services packages to production servers.

Lessons

- Package Configurations
 - Deploying Packages
- Lab : Deploying Integration Services Packages

- Creating a Package Configuration
- Preparing a Package for Deployment
- Deploying a Package

After completing this module, students will be able to:

- Implement package configurations.
- Deploy packages.

Module 9: Managing and Securing Packages

This module describes the management tasks that relate to Integration Services packages and explains how to perform those tasks by using the Integration Services management tools. It also describes how to secure Integration Services packages.

Lessons

- Managing Packages
- Securing Packages

Lab : Managing and Securing Packages

- Importing a Package
- Configuring and Executing a Package
- Scheduling a Package
- Securing a Package

After completing this module, students will be able to:

- Manage packages.
- Secure packages.
